FREEZE THE TARGET, TOLERANCES AND INFORMATION CLASS

1 INFORMATION

Known loading and timing

Observation bands (schematic)

Input envelope; declared priors

Check information assumptions

2 FINITE RANGE

Uncapped positive class

$$\kappa > \delta$$

or

$$\kappa = \delta, \quad \gamma \geq \beta$$

Qualified caps require their own class

3 CONTINUOUS ENCLOSURE

Physical inner / continuous outer

Bracket width and numerical error

Interval geometry is schematic

Refine if unresolved

4 TOLERANCE DECISION

Absolute-error rule shown

$D_{out}/2 \leq \varepsilon$	**Sufficient**
$D_{in}/2 > \varepsilon$	**Insufficient**
Otherwise	**Unresolved**

Relative-error rule: Proposition 9

5 AUDITABLE RECORD

- Information class and target
- Endpoint brackets
- Decision and numerical status
- Assumptions and provenance

Unbounded

6 INFORMATION IMPROVEMENT

- Loading / observation timing
- Input calibration
- Independently justified priors
- Re-evaluate the target request

Insufficient precision: improve information, then re-evaluate
